

NEW FUNDING ROUND!

2021/22 Landholder Applicant Guidelines

A Grassy Woodland is dominated by eucalypts, typically boxes and red gums and have a relatively open canopy with sparsely distributed understorey shrubs and a conspicuous and diverse ground cover of native grasses and herbs.

The Grassy Woodlands Project aims to:

- Improve condition, extent and connectivity of Grassy Woodland patches in our region.
- Increase and protect habitat for Grey-crowned babbblers and other significant woodland birds.

The project supports landholders to protect and enhance remnant native vegetation or to revegetate new areas on their properties. Another activity that can be funded is enhancing old shelterbelts by understory planting or direct seeding.

Applicant Round Closes:

22 December 2021
